DB Browser User Guide

01

How to install

Step 1: Go to https://sqlitebrowser.org/dl/
Step 2: Download the latest appropriate
DB Browser for SQLite for your computer.

02
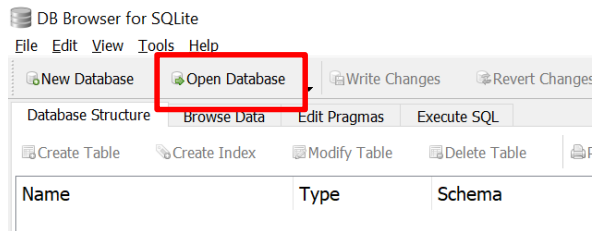

Open Database

Click on 'Open Database' and
select database of choice.

03

1. Click on 'Browse Data' to see all the data saved.
2. Toggle between the data of the 3 tables.
3. Filter to find any data with keywords.
4. Go to any row number if necessary.

DB Browser User Guide

04

DB browser allows all the tables of data to be exported to CSV files if necessary.

05

Export only the searched data as a CSV file.

06

Troubleshooting

- Ensure that the version of DB Browser is the latest release.
- Save all changes made to the database before closing the application.
- If the database or application gets corrupted in the process of downloading, delete and uninstall all of it and re-download it.

07

Alternatives

- SQLiteStudio is a good alternative that does the same functions as DB Browser: https://sqlitestudio.pl/
- Our GUI can do simple searches for tags only.
